

# Editorial

The current issue includes Rikke Lybæk & Tyge Kjær's contribution "*Lessons learned from deployment of biogas technology in Thailand, Ghana & Denmark - Case study analysis of emerging organizational and technical concepts*" with an aim of develop forward the deployment of biogas technology by sharing lessons learned and practice examples between developed countries and developing countries.

The current issue hereby seeks to expand the existing knowledge on technology diffusion by investigating the current situation for the biogas sector within Thailand, Ghana and Denmark emphasizing the available biomass feedstock for biogas production, the technologies applied and the production and utilization of energy services and digestate. Besides this the framework conditions for supporting the dissemination of biogas plants, and the socio-cultural conditions, are assessed within the three countries applying an Energy Chain approach. Hereby revealing several learning opportunities between Thailand, Ghana and Denmark that could accelerate deployment of biogas technology.
